PRODUCT DATA: POWDER FILLER

INSTRUCTIONS:

Add to each kilo of product 400 ml of warm water, mix until you obtain a homogeneous paste

Mix with water adding 400 ml of warm water for each kilogram of PRODEPA POWDER FILLER.

The mixture can be performed manually or mechanically using an electric mixer.

For the filling of cavities, it is recommended to use a medium size spatula , which allows to press well into the hollow. Whenever possible, make sure that the width of the spatula is slightly greater than the size of the cavity.

Regarding smoothing surfaces, it is advisable to always do it vertically from bottom to top. Always place excess material and then remove the excess.

When the material dries, sand and then apply another layer of plaster horizontally from right to left.

For a flawless finish, the surface should be sanded after the second layer and painted with PRODEPA paint.
